## The **ONLY** EQ Coating Featuring Inter-Reactive™ Coating Technology

With zinc prices on the rise, it is now more important than ever before to get the most out of your dollar. Eco-Green Coatings' understands this need and offers our InterCoat™ ChemGuard Family of Coatings as the solution.

By using the InterCoat™ ChemGuard Family of Coatings, our customers can purchase their steel with lower to minimal zinc coating weights, while far exceeding the performance of your competitor's steel that has been coated with much heavier zinc weights. This gives Eco-Green customers the leg up on their competition.

Eco-Green's InterCoat™ ChemGuard Family of Coatings is the only EQ Coating featuring Inter-Reactive™ Coating Technology. Not only do our products provide superior corrosion resistance, but they also exhibit self-healing characteristics for scratches and perforation, as well as superior edge protection (as seen above).

In a rapidly advancing world, see how Eco-Green Coatings can you stay one-step ahead of the competition.

Contact an Eco-Green Representative today and see the InterCoat™ ChemGuard Advantage for yourself, you won't be sorry.
